RISE: Risk Identification System for Early Detection

An innovative AI-Powered Clinical Decision Support System (CDSS) designed to enhance early risk stratification. Our mission is to empower healthcare professionals with actionable insights, ensuring timely interventions for children at risk.

The Gap in Early Detection

- Late Diagnosis Challenges
- Time-Consuming Assessments
- Subjective Assessment Variability
- Fragmented Tracking Systems

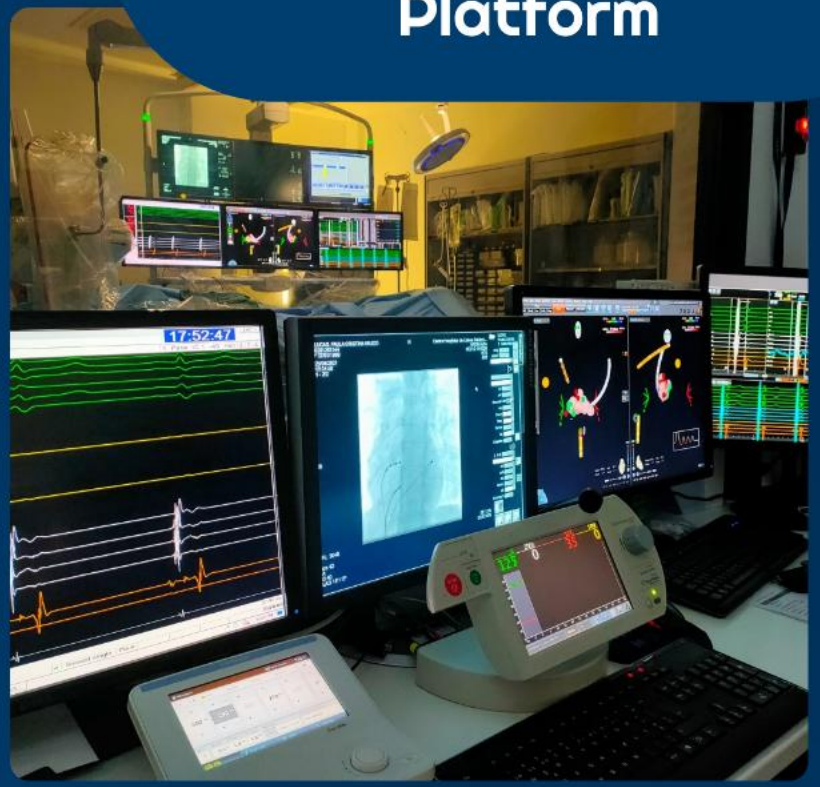
Our Solution: An Integrated AI Platform



- Real-time Risk Scoring
- Longitudinal Tracking
- Clinician-Centric Approach
- Scalable for ECD Programs

Risk Classifier

A robust model ensuring accurate risk stratification for timely interventions.

ROC-AUC > 0.88
High Accuracy

4 Tiers
Stratification Levels

Low Risk
Routine Monitoring

Mild Concern
Ongoing Observation

Moderate Risk
Referral Recommended

High Risk
Immediate Action Required

Metric	Score	Interpretation
Accuracy	**96.8 %**	Correctly classifies 968 out of 1 000 children
Precision	**98.9 %**	Of 100 flagged as high-risk, ~99 truly are
Recall (Sensitivity)	**96.4 %**	Catches 964 out of 1 000 actual autism cases
Specificity	**96.9 %**	Correctly identifies 969 out of 1 000 non-autism cases
AUC-ROC	**0.9951**	Near-perfect discrimination ability
F1-Score	**0.9761**	Balanced precision–recall performance

(TP = 1144, TN = 400, FP = 13, FN = 43, total = 1 600)

Why Trust the AI? (SHAP Explanations)

Building confidence in AI predictions through transparency and tailored insights.

Top 5 contributing features highlighted in every prediction

Transparency

Eliminates uncertainty by revealing risk flagging reasons

No 'Black Box'

Roles & Accessibility

Anganwadi/Frontline Workers: Mobile-friendly assessment entry.
System,State,District and mandal Admin: High-level population health analytics.
Parents: Accessible portal for tracking their child's progress.

From Screening to Intervention

A Structured Approach to Autism Care Continuum

Initial Screening

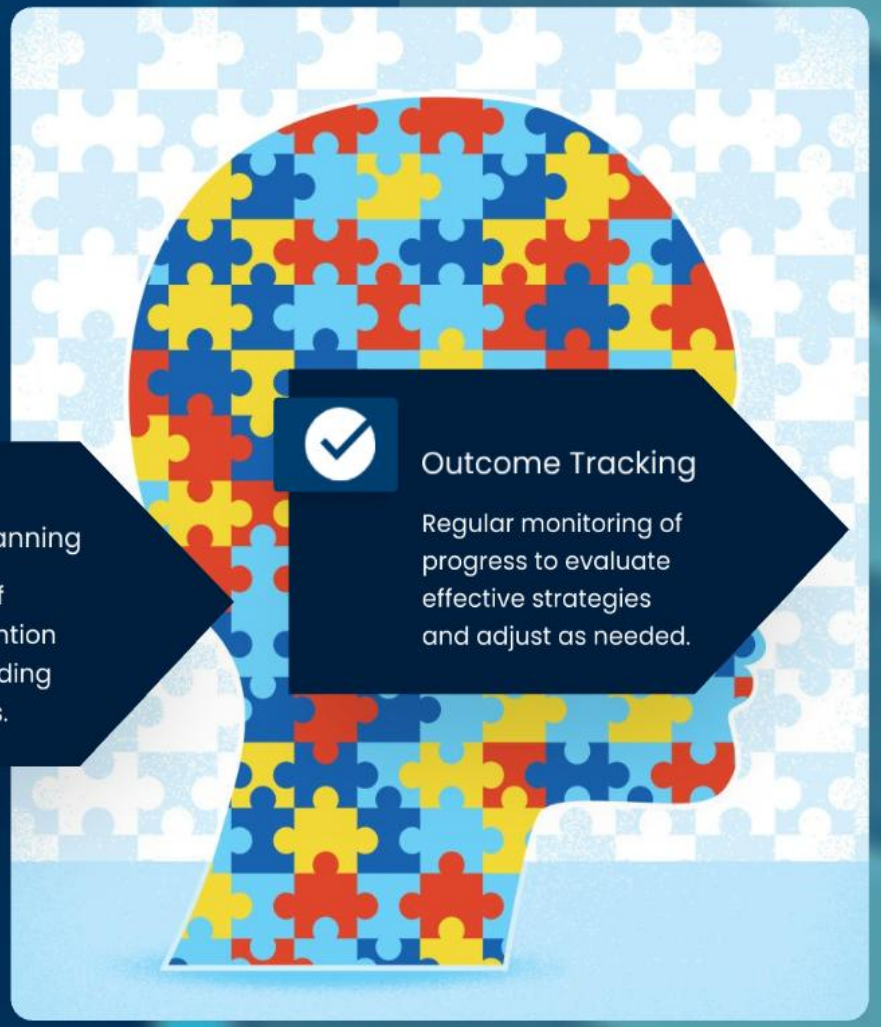
Automated assessments identify risk levels early in the process.

Risk Assessment

AI-driven analysis connects children with appropriate specialists based on identified risk.

Intervention Planning

Development of tailored intervention strategies including therapy options.



Outcome Tracking

Regular monitoring of progress to evaluate effective strategies and adjust as needed.

Efficiency & Results

Transforming the assessment process for better outcomes.

60%

Faster assessment time from 2 hours to 45 minutes.

Thousands

Clinical profiles used for data-driven training.

Cloud-Ready

Secure PostgreSQL/ FastAPI architecture for deployment.

Complete Compliance

Incorporates audit logging and RBAC security.

Act Today for a Brighter Tomorrow

Implementing RISE enables early detection of ASD, which is critical for effective interventions. By identifying children at risk sooner, we not only save lives but also significantly lower the economic burden associated with long-term care, creating a healthier future for families and communities alike.
